APPENDIX 6.3: REVISED MEMORY AND BEHAVIOR PROBLEM CHECKLIST

BRIEF DESCRIPTIVE INFORMATION

Description and Psychometrics

The Revised Memory and Behavior Problems Checklist (RMBPC; Teri et al., 1992) is a 24-item informant-report measure of observable behavior problems in dementia patients. It is a self-administered caregiver questionnaire, on which the informant rates (a) the frequency of each behavior problem during the past week (1 = not in the past week, to 4 = daily or more often) and (b) their reaction to each behavior (e.g. how bothered or upset the caregiver feels when the behavior occurs with 0 = not at all to 4 = extremely).

The RMBPC provides a method of assessing overall level of behavior problems, as well as specific areas of problems (memory, depression, disruption), and caregiver reactivity associated with these behaviors. It is unique in providing this latter dimension. It is also easy to use and easy to score. Currently, it is being used in a series of longitudinal investigations and treatment outcome studies. It has been translated into French and Mandarin for international use.

**RMBPC SCORING**

**Subscales:**
- Memory: 7 items (#1, 2, 3, 4, 5, 6, 7)
- Depression: 9 items (#12, 14, 17, 18, 19, 20, 21, 22, 23)
- Disruption: 8 items (#8, 9, 10, 11, 13, 15, 16, 24)
- Total: 24 items

**Frequency Scoring:** Sum items with scores of 0 to 4 on subscales and total. If question score is 9, exclude it from the sum and item count.

Sum items for each subscale as above. Then compute the mean item score for each subscale by dividing by the number of items included in the sum. The range for each subscale is 0 to 4.

The total frequency score is the sum of all items divided by 24. It also has a range of 0 to 4.

Reaction Scoring: Sum scores on items that had a frequency rating of 1 to 4 on subscales and total. If question score is 0 or 9, exclude it from the sum and item count.

Include only items with frequency scores of 1 to 4 in the reaction scoring. Compute the mean reaction score by summing reaction scores of these items and then dividing by the number of items included in the sum. The range for each subscale is 0 to 4.

The total reaction score is computed in the same way, to obtain a possible range of 0 to 4.
Instructions: The following is a list of problems people/patients with a memory loss sometimes have. Please indicate if any of these problems have occurred during the past week. If so, how much has this bothered or upset you when it happened?

Use the following scales for the frequency of the problem and your reaction to it. Please read the description of the ratings carefully.

**Frequency Ratings:**
- 0 = never occurred
- 1 = not in the past week
- 2 = 1 to 2 times in the past week
- 3 = 3 to 6 times in the past week
- 4 = daily or more often
- 9 = don’t know/not applicable

**Reaction Ratings:**
- 0 = not at all
- 1 = a little
- 2 = moderately
- 3 = very much
- 4 = extremely
- 9 = don’t know/not applicable

Please answer all the questions below. Check one box from 0–9 for both **Frequency** and **Reaction**.

1. Asking the same question over and over.
2. Trouble remembering recent events (e.g., items in the newspaper or on TV).
3. Trouble remembering significant past events.
4. Losing or misplacing things.
5. Forgetting what day it is.
6. Starting, but not finishing, things.
7. Difficulty concentrating on a task.
