Note. When studies did not provide sufficient information for moderators (developmental phase, race/ethnicity, SES) or the sample was heterogeneous, the effect size was not used for that particular moderator analysis and is marked “N/A” in the table. Studies that did not provide sample size information are marked with a dash in the table. When analyzing these studies, we imputed the average sample size for each individual meta-analysis (e.g., parents’ school involvement and achievement). Some lines may appear to have identical information in the first eight columns. This is due to unexamined moderators (e.g., gender, parent education, immigration status) or because the authors had multiple parent involvement or child adjustment measures that fell into the same category according to our coding scheme but reported separate effect sizes for each one.
