

Figure S5.

Matrix maps representing alpha ISPC (**A**) and imISPC (**B**) averaged across participants, as a function of session (test, retest), time (-3 to +1 s), and ROI pairs (1 = left temporal, 2 = left central, 3 = frontal, 4 = right central, 5 = right temporal, 6 = occipital). Within-ROI connectivity (i.e., 1:1, 2:2, etc.) represents the average (arithmetic mean) of the values obtained for non-identical channel pairs.
