

Figure S7. Matrix maps representing Pearson's correlations conducted on the inter-session change scores between the number of holed putts and alpha ISPC (A) and imISPC (B), and between conscious processing and alpha ISPC (C) and imISPC (D), as a function of time (-3 to +1 s), and ROI pairs (1 = left temporal, 2 = left central, 3 = frontal, 4 = right central, 5 = right temporal, 6 = occipital).
