Graphs of normalized measures

Figure 1. The color-corrected zRTs for the bias- and other color in the critical Block 4 of Experiment 1. These data were used in the the primary analysis of Experiment 1.

Figure 2. Color-corrected zRTs in all neutral blocks of Experiment 2. Note that Block 1 is *not* preceded by a color bias, and that Blocks 5-8 occur in the second session a week later. Blocks 7 and 8 were completed right after an inverted bias block.
