

Online Appendix – Attrition Analyses

	Complete Case vs. Missing Comparison			<i>p</i> -value
	<i>M</i> Complete	<i>M</i> Missing	<i>t</i> -value	
Demographic Characteristics				
Age	12.66	13.54	10.58	<.001
Parental Education	2.50	2.43	-3.07	.002
Individual Factors				
Fair Society Beliefs	3.44	3.05	-9.10	<.001
Volunteerism	0.66	0.63	-1.26	.209
Substance Use	4.21	5.43	9.36	<.001
Ecological Assets				
Family Democratic Climate	3.77	3.68	-2.58	.010
Family Compassion Messages	4.28	4.20	-2.62	.009
Trusted Friendship	4.27	4.21	-1.97	.049
School Solidarity	3.12	2.84	-7.07	<.001
School Democratic Climate	3.62	3.59	-0.93	.351
Community Connectedness	3.57	3.38	-5.79	<.001
Dependent Variable				
Social Responsibility Values	3.98	3.82	-4.98	<.001

Note. Comparisons estimated differences between individuals with complete cases across all three waves and individuals who dropped out of the study at Waves 2 or 3. Chi-square tests examined whether attrition was related to gender, two-parent household, and race-ethnicity: There were no differences by gender or two-parent household; adolescents with complete cases were more likely to be White and less likely to be Black or Hispanic than expected by chance, $\chi^2(3) = 52.59, p < .001$. Similar analyses compared adolescents with complete cases to adolescents who entered the study at Wave 2. Youth who entered the study at Wave 2 were younger, had higher substance use, and reported lower family democratic climate, school solidarity, school democratic climate, and fair society beliefs.
