

Open Practices Disclosure

Manuscript Title: Using Positive Social Autobiographical Memory Recall to Enhance Social Reward Seeking After Exclusion in Individuals with High Social Anxiety
Author Names (in order of authorship): Sophie M. Kudryk, Adrienne Richter Powell, Jolie T. K. Ho, & David A. Moscovitch
Corresponding Author: Sophie M. Kudryk

Articles are eligible to earn badges that recognize open scientific practices: publicly available data, material, or preregistered research plans. You can read more about the badges on the Open Science Framework [wiki](#).

To apply for one or more badges acknowledging open practices, please check the box(es) corresponding to the desired badge(s) below and provide the information requested in the relevant sections. To qualify for a badge, you **must** provide a URL, doi, or other permanent path for accessing the specified information in a public, open-access repository, and the specified information must be provided in a format that is time-stamped, immutable, and permanent. **Qualifying public, open-access repositories are committed to preserving data, materials, and/or registered analysis plans and keeping them publicly accessible via the web in perpetuity.** Examples include the Open Science Framework ([OSF](#)) and the various Dataverse networks. Hundreds of other qualifying data/materials repositories are listed at <http://re3data.org/>. Preregistration of an analysis plan must take place via a publicly accessible registry system (e.g., [OSF](#), [ClinicalTrials.gov](#) or other trial registries in the [WHO Registry Network](#), institutional registration systems). **Personal websites and most departmental websites do not qualify as repositories.**

Authors who wish to publicly post third-party material in their data, materials, or preregistration plan must have the proper authority or permission agreement in order to do so.

There are circumstances in which it is not possible or advisable to share any or all data, materials, or a research plan publicly. For example, there are cases in which sharing participants' data could violate confidentiality. If you would like your article to include an explanation of such circumstances and/or provide links to any data or materials you have made available—even if not under conditions eligible to earn a badge—you may write an alternative note that will be published in a note in the article. Please check this box if you would like your article to include an alternative note and provide the text of the note below:

☐ **Alternative note:**

Open Data Badge

Provide the URL, doi, or other **permanent path** for accessing the time-stamped and immutable data in a **public, open-access repository**:

<https://osf.io/yvtjr/>

- ☒ Confirm that there is sufficient information for an independent researcher to reproduce **all of the reported results**, including codebook if relevant.

Open Materials Badge

Provide the URL, doi, or other **permanent path** for accessing the time-stamped and immutable materials in a **public, open-access repository**:

<https://osf.io/yvtjr/>

- ☒ Confirm that there is sufficient information for an independent researcher to reproduce **all of the reported methodology**.

Preregistered Badge

1. Provide the URL, doi, or other **permanent path** to the time-stamped and immutable registration in a **public, open-access repository**:

<https://doi.org/10.17605/OSF.IO/D3ZHF>

2. Was the analysis plan registered prior to examination of the data or observing the outcomes? If no, explain.**

Yes.

3. Were there additional registrations for the study other than the one reported? If yes, provide links and explain.*

No.

4. Were there any changes to the preregistered analysis plan for the primary confirmatory analysis? If yes, explain** There was an amendment to the analysis plan (<https://doi.org/10.17605/OSF.IO/A43ZB>) that was made before data had been observed beyond data cleaning, which provided additional details to the data analysis plan to improve clarity. We also added an additional primary outcome measure (i.e., reward anticipation) that was initially listed as an exploratory measure, as we reconsidered its importance in the study. We did not expect these changes to alter the outcomes of the study, only increase transparency in the steps of our analyses.

5. Are all of the analyses described in the registered plan reported in the article? If no, explain.*

Yes.

*No badge will be awarded if (1) is not provided, **or** if (3) is answered “yes” without strong justification, **or** if (5) is answered “no” without strong justification.

**If the answer to (2) is “no,” the notation DE (Data Exist) will be added to the badge, indicating that registration postdates realization of the outcomes but predates analysis. If the answer to (4) is “yes” with strong justification for changes, the notation TC (Transparent Changes) will be added to the badge, indicating that the analysis plan was altered but the preregistered analyses and rationale for the change are provided.

By signing below, authors affirm that the above information is accurate and complete, that any third-party material has been reproduced or otherwise made available only with the permission of the original author or copyright holder, and that publicly posted data do not contain information that would allow individuals to be identified without consent.

Signature: A handwritten signature in black ink, appearing to read 'S. Kudryk', written over a horizontal line.
