Note. *B* = unstandardized regression coefficient; *SE* = standard error; β = standardized regression coefficient; CI = confidence interval; R^2 = coefficient of determination; ΔR^2 = change in R^2. Reference groups were participants aged 25 years or younger and enrolled at the university for less than 1 year. Sample sizes differ across analyses because listwise deletion was used for participants with missing data on variables included in each analysis. *$p < .05$. **$p < .01$.

Note. Gender was coded as a binary variable. Age and years enrolled were dummy coded with participants aged ≤25 years and enrolled <1 year as the reference groups. Model 1 included main effects of gender, age, and years enrolled. Model 2 added gender interaction terms. Sample sizes differ across analyses because listwise deletion was used for participants with missing data on variables included in each analysis. **p* <.05. ***p* < .01.
