

Full Disclosure of Interests

This section to be completed by author(s):

Journal: Psychological Methods Issue: _____

Article title: Beta-Binomial Meta-Analysis of Individual Differences Based on Sample Means and Standard Deviations: Studying Reliability of Sum Scores of Binary Items

Authors: Philipp Doebler, Susanne Frick, Anna Doebler

In psychology, as in other scientific disciplines, professional communications are presumed to be based on objective interpretations of evidence and unbiased interpretations of fact. An author’s economic and commercial interests in products or services used or discussed in their papers may color such objectivity. Although such relationships do not necessarily constitute a conflict of interest, the integrity of the field requires disclosure of the possibilities of such potentially distorting influences where they may exist. The reader may then judge and, if necessary, make allowance for the impact of the bias on the information being reported.

In general, the safest and most open course of action is to disclose activities and relationships that, if known to others, might be viewed as a conflict of interest, even if you do not believe that any conflict or bias exists.

Whether an interest is “significant” will depend on individual circumstances and cannot be defined by a dollar amount. Holdings in a company through a mutual fund are not ordinarily sufficient to warrant disclosure, whereas salaries, research grants, consulting fees, and personal stock holdings would be. Being the copyright holder of and/or recipient of royalties from a psychological test might be another example. Participation on a board of directors or any other relationship with an entity or person that is in some way part of the paper should also be carefully considered for possible disclosure.

In addition to disclosure of possible sources of positive bias, authors should also carefully consider disclosure where circumstances could suggest bias **against** a product, service, facility, or person. For example, having a copyright or royalty interest in a competing psychological test or assessment protocol might be seen as a possible source of negative bias against another test instrument.

Please check one line only:

I have read the above APA policy on full disclosure, and I declare that

- Neither I nor any member of my immediate family have a significant financial arrangement or affiliation with any product or services used or discussed in my paper, nor any potential bias against another product or service.
- I (or an immediate family member) have a significant financial interest or affiliation with the following products or services used or discussed in my paper:

Name of product or service and nature of relationship with each (e.g., stock or bond holdings, research grants, employment, ownership or partnership, consultant fees or other remuneration).

Name of Product or Service	Relationship/Interest

If an author note should be added to your manuscript in reference to any disclosure(s) noted above, please check the line below and attach to this form the text of the author note.
