INSTRUCTIONS

Imagine the following situation. You are working in a large company where you currently earn 10,000 Yuan per month after taxes, and your job is guaranteed for at least the next 5 years.

Experiment 1

You want to buy a new car from a car dealer. The price of the car is 120,000 Yuan. However, currently you do not have enough money to buy it so the dealer offers you a loan for this exact amount. This loan is for 5 years. You may select from the following 3 payment proposals (at 10%/0% interest)

Your tasks:

- 1) Please try to score EACH PROPOSAL from 1 to 7, where 1 is the score to be assigned to the proposal least favorable and 7 to the most favorable proposal.
- 2) Please select the reason of choice of (A~E), please specify the reason if you choose E.

You want to buy a 6,000 Yuan smart phone. The vendor offers you a loan for this exact amount. This loan is for 5 years. You may select from the following 3 payment proposals (at 10%/0% interest)

Your tasks:

- 1) Please try to score EACH PROPOSAL from 1 to 7, where 1 is the score to be assigned to the proposal least favorable and 7 to the most favorable proposal.
- 2) Please select the reason of choice of (A~E), please specify the reason if you choose E.

Experiment 2 Now please consider to buy a new car and a phone by using a combination loan. This loan is for 5 years. You may select from the following 5 payment proposals (at 10%/0% interest)

Your tasks:

- 1) Please try to score EACH PROPOSAL from 1 to 7, where 1 is the score to be assigned to the proposal least favorable and 7 to the most favorable proposal.
- 2) Please select the reason of choice of (A~E), please specify the reason if you choose E.

Questionnaire in experiment 1 (10% car loan)

PROPOSAL #1 (falling Car Loan)

The monthly principal repayments of this car loan are ¥2,500 in year 1, ¥2,250 in year 2, ¥2,000 in year 3, ¥1,750 in year 4 and ¥1,500 in year 5. Each month you will pay 10% p.a. (per annum) interest for the outstanding debt.

Monthly payment = principal repayment + interest
(principal repayments in blue and interests in red):

	Principal	Interest	Total payment
Year 1	30000	10625	40625
Year 2	27000	7762.5	34762.5
Year 3	24000	5200	29200

Score PROPOSAL #3 (1 ~ 7)

Please select the reason of choice in experiment 1 (A~E), please specify the reason if you choose E.

Reason of choice:

A: Optimization

B: Constrained optimization

C:Ideal distribution

D:Ideal consumption

E. other reasons

Please specify the reason if you choose E_____

A: Optimization

I always choose the profile that maximize my utilities, the loan payment plan with the lowest present value in this case.

B: Constrained optimization

I am aware of my motivational or cognitive limitations (I cannot control my spending, I cannot understand the true cost of the loan), and thus, I will select the option that can maintain my outcomes as close as possible to optimal results.

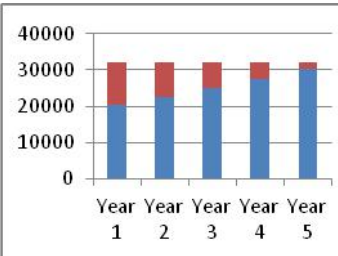

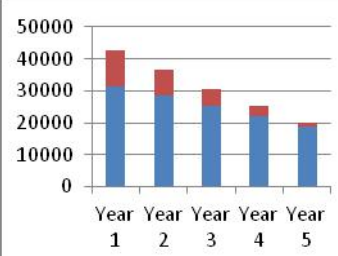

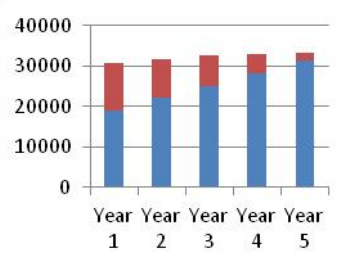

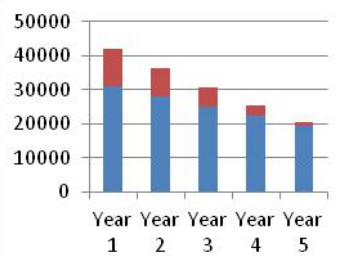

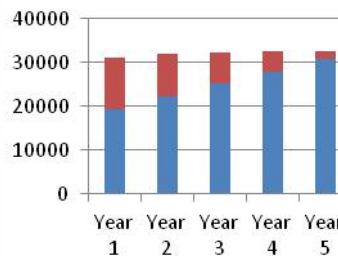

C:Ideal distribution

The distribution of the loan payment make me feel comfortable, is linked to a feeling of mastery of life.

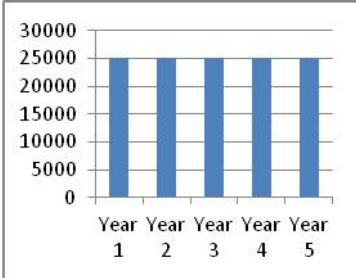

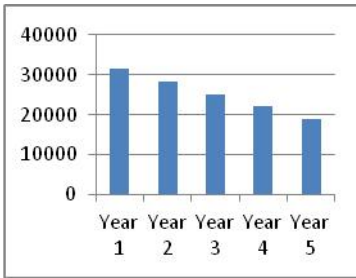

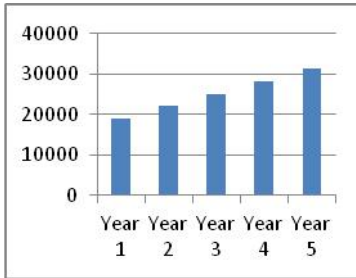

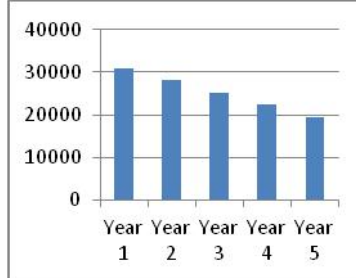

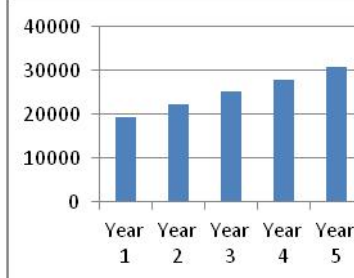

D:Ideal consumption

The profile is appropriate, because I can have the money available when it is needed.

Please select the reason of choice in experiment 2 (A~E), please specify the reason if you choose E.

Reason of choice:				
A: Optimization	B: Constrained optimization	C:Ideal distribution	D:Ideal consumption	E. other reasons
Please specify the reason if you choose E_____				

A: Optimization

I always choose the profile that maximize my utilities, the loan payment plan with the lowest present value in this case.

B: Constrained optimization

I am aware of my motivational or cognitive limitations (I cannot control my spending, I cannot understand the true cost of the loan), and thus, I will select the option that can maintain my outcomes as close as possible to optimal results.

C:Ideal distribution

The distribution of the loan payment make me feel comfortable, is linked to a feeling of mastery of life.

D:Ideal consumption

The profile is appropriate, because I can have the money available when it is needed.
