\*\*\*p<.001, \*p<.05. Note that the sample of available words ranges widely across variables, with variables based on McRae et al. (2005) norms (8, 9, 12) including only 541 words, measures 13 and 14 including approximately 4000-5000 words, and all other measures including 12,000 to 80,000 words. Overlapping samples for correlations therefore range from roughly 400 to 75,000. 1-2 Brysbaert & New (2009); 3 Kuperman et al. (2012); 4 Brysbaert & Biemiller (2017); 5 Hoffman et al. (2013); 6 Brendan Johns, personal
